SENIOR FULL STACK ENGINEER

Full stack engineer specializing in React, TypeScript, Node.js/Express, and PHP/Drupal. Builds internal platforms and customer-facing products, reusable frameworks, API integrations, reporting tools, and automation.

Professional Experience

The Institutes - Full Stack React Developer

Feb 2022 - Present

- **Led development of Omni**, a React and Node.js/Express admin platform supporting customer-success outreach, billing, student/course access, and product configuration for the public website.
- Built a reusable JavaScript form framework that consolidated **8-10 files into two**, reduced required code by **approximately 80%**, and supported junior developers and AI-assisted development.
- Rearchitected the nightly iMIS-to-StarChapter integration, correcting unreliable customer-data synchronization and restoring accurate records.
- Built internal reporting tools and automated workflows supporting business operations.
- Developed production website features supporting new products across different states, working across React, PHP, and Drupal.
- Integrated Algolia search with custom React components and Drupal plugins, and built the search results interface.

XDA-Developers - Lead React Developer

2020 - 2021

- Built an internal analytics application using React and GraphQL to track sponsored-product commissions and advertising performance, helping identify the most profitable partners.
- Designed and developed the Huawei partnership subdomain to support contractual deliverables.

Pocketnow - Full Stack Developer

2019 - 2020

- Developed reusable UI components, content-authoring documentation, and custom WordPress plugins that enabled business users to make website changes.
- Automated deployments using Fabric and Docker, and designed the website homepage in Adobe XD.

Upwork - Freelance Developer

2017 - 2019

- Designed and maintained websites and applications for clients, and containerized Linux/NGINX/MySQL/PHP environments for WordPress development.

Technical Skills

Frontend: JavaScript, TypeScript, React, Redux, HTML, CSS/SCSS

Backend and data: Node.js, Express, Python, PHP, SQL, MySQL, PostgreSQL

APIs and platforms: REST APIs, GraphQL, Keycloak authentication, Algolia, WordPress

Drupal: Twig, Views, Composer, Drush, API integrations

Testing and delivery: Jest, Playwright, Git, CI/CD, Docker, Kubernetes, Linux, Bash

Cloud and AI tools: AWS (frontend integration), Claude Code, GitHub Copilot, ChatGPT

Education

Computer Science degree | Delaware County Community College 2020
